DATA ROOM FIELDS

VC READINESS SCORE

A live readiness score across 6 dimensions. Updated every time you change a field.

Not a one-time checklist. A continuously updated score built from your actual data room, fundraising materials, team profile, traction metrics, investor fit, and market signals. Shows exactly where you are strong and exactly what to fix before you reach out.

YOUR READINESS SCORE — LIVE

74 /100

Data room		90%
Legal readiness		65%
Financial clarity		80%
Investor fit		72%
Governance		50%
Market narrative		88%

FIX BEFORE YOU PITCH

- IP assignment missing for 2 technical co-founders
- Board resolution for current round not uploaded
- SHA drafted but not executed by all parties
- ESOP scheme referenced in deck but not formally established
- Cap table — clean and verified
- Pitch deck v4 — complete and uploaded
- Financial model — uploaded with documented assumptions

NINE CAPABILITIES — FOUNDER TRACK

1

Guided Investor Data Room

Stage-aware structure across 10 sections and 85 fields. Pre-seed requirements differ from Series A. The platform knows the difference.

- Company identity, founding team, product, financials, traction, unit economics, cap table, legal, and investor criteria — all structured
- Stage tag on every field — pre-seed through Series A — so founders only see what applies to their raise
- Sector add-ons for FinTech, HealthTech, SaaS, DeepTech, AgriTech, D2C, EdTech, Marketplace
- Shareable link with section-level access control, password protection, NDA-accept flow, and open tracking
- Field source label on every entry — Manual with last-updated date, Auto from connected intelligence data, or Computed from other fields

2

Legal Readiness Framework

Identifies the legal gaps to ensure investor's lawyers find them

- IP assignment check for all
- SHA execution status — drafted/signed/missing
- Cap table reconciliation against legal records
- ESOP formal establishment
- Jurisdiction-aware legal checks with obtained/pending/expired
- Governance records, DPIIT registration tracked

3

Investor Fit Scoring — 8 signals per investor

Powered by 200,000+ funds and 7,000+ LP profiles. Not a generic directory. A ranked, signal-rich match for

- Recently active funds — last investment date, active deployment status, not between funds
- Similar companies funded — actual portfolio names in your sector and stage from the last 3 years
- Average cheque size — whether your ask falls within their typical first cheque range
- Time since last investment — whether the fund is in an active deployment window right now
- Sector momentum — whether or slowing
- Partner responsible — the spec general contact
- Portfolio overlap check — whether business
- Warm introduction paths — ma investor

4

Grant and Competition Discovery

150+ government schemes matched to each founder's profile. Non-dilutive capital most founders never knew they qualified for.

- BIRAC BIG, SPARSH, LEAP, BIPP matched to healthcare and life science founders
- DST NIDHI, TIDE 2.0, PRAYAS, SEED for technology and deep tech founders
- MeitY SoftEx, TIDE 2.0, and startup accelerator initiatives
- State-level funds — KTIS, Tamil Nadu Startup Hub, Maharashtra Innovation Society, and 30+ state programmes
- Live deadline tracking — application windows and eligibility criteria flagged per scheme

5

Institutional Templates

Fundraising materials built to what you expect — not what looks good

- Pitch deck framework — slides partners look for at each stage
- Financial model built to institutional scenario analysis included
- SAFE, board resolution, and other legal templates
- Investor update templates — how to communicate over time
- Term sheet explainer — plain language on what to push back on

6

Certified Audit and Verification New

Third-party sign-off that shortens investor diligence. Discover deficiencies before investors do — not during their review.

- Certified auditor reviews documentation completeness, governance readiness, financial disclosures, and legal preparedness
- Written audit report delivered and attachable to the shared data room link
- Investors who receive an audited data room spend less time on document archaeology — more time on investment judgment
- Status flow: Requested, Assigned, In Progress, Completed — visible in the founder dashboard
- Credit-based: founders request verification when they need it, not as a mandatory step

7

Mentor Connect New

Even when founders know what needs fixing, they do not always know how to fix it. Targeted expertise for s

- Quick Call (20-30 min): one specific problem, one expert. IP assignment question, SHA negotiation, specific investor relationship challenge.
- Book in minutes. Calendar link confirmed automatically.
- Full Session (60 min): data room review, pitch practice, cap table restructuring, investor targeting strategy.
- Mentors rated after every session. Quality self-enforcing through the ratings system.

8

Intelligence Link New

Your Capital Readiness data room links to the NestLens Intelligence entity graph. Founder-verified data improves your company's Intelligence profile.

- Company matched to DataNest entity on CIN — fields already in Intelligence auto-populate with source label Auto
- Fields you verify raise the confidence weight on your entity profile — investors see higher-confidence data when they look you up
- When NestIntel finds new information about your company — MCA update, press coverage, SEBI filing — an update flag appears in your data room for review
- Investor matching pulls from live Intelligence data — match scores update when funds change their thesis or deployment status

9

Shareable Views and Analytics
Gated, trackable, password-protected. You control exactly who opened what.

- Generate separate links for different views
- Section-level drill-down analytics
- Password protection, NDA-agreeable
- Unique viewer count and open history

INVESTOR FIT SCORING — WHAT FOUNDERS ACTUALLY SEE

Nexus Venture Partners — Fit analysis for AgriStack Technologies Pvt. Ltd.

94% fit

Stage: Pre-Seed · Sector: Agritech · Geography: India · Round size: \$500K

Recently active

Last investment **6 weeks ago**. Fund IV actively deploying. Not between funds.

Similar companies funded

DeHaat, Ninjacart, Gramophone — pre-seed Agritech backed in last 4 years.

Average cheque size

\$300K-\$750K at pre-seed. Your \$500K ask is at the midpoint.

Sector momentum

Agritech investments **up 40%** in last 12 months. Stated Fund IV priority.

Partner responsible

Sandeep Singhal leads Agritech deals. Contact him directly.

Portfolio overlap

No direct conflict. DeHaat is upstream supply chain — different layer.

Time since last investment

6 weeks — within their 8-10 week deployment cadence. Good timing.

Warm intro paths

2 paths — Omnivore Partners (co-investor) and IIM Bangalore alumni network.

CONNECTED TO NESTLENS INTELLIGENCE

DATANEST INTELLIGENCE LINK

Your data room is connected to the NestLens Intelligence entity graph.

When you verify a field in your data room — upload your incorporation certificate, confirm your revenue run rate — that verification raises the confidence weight on your entity in the Intelligence database. Investors who look you up through NestLens Intelligence see higher-confidence data because you have verified it yourself. And when NestIntel discovers new information about your company, it appears in your data room as an update available to review.

- ✓ Company matched to DataNest entity on CIN — existing Intelligence data auto-populates your data room

- ✓ Fields you verify raise confidence weights for Intelligence subscribers looking at your entity

- ✓ NestIntel update flags appear in your data room when new information is found about your company

- ✓ Investor matching pulls from live Intelligence database — scores update as funds change thesis

"Our objective is not helping founders build a data room. It is helping founders become easier to diligence. The faster an investor completes their review, the faster the founder reaches the investment committee."

Deficiencies found before investor diligence — not during

Right 12 investors with full signal context — not 50 random names

Third-party audit report reduces friction between first meeting and term sheet
